

Ideation Phase

Empathize & Discover

Date	28 June 2026
Team ID	
Project Name	Smart Agricultural Production Optimization Engine
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

User Persona

Primary User: Small and Medium Farmer

Think & Feel

- Wants to maximize crop yield and farm productivity
 - Wants to select the most suitable crop for available soil conditions
 - Concerned about making incorrect crop choices
 - Wants reliable and data-driven recommendations
 - Wants to reduce farming risks and improve income
 - Seeks easy-to-use technology for better decision-making
-

Hear

- Advice from neighboring farmers
- Recommendations from agricultural extension officers
- Government agricultural awareness programs
- Agricultural training workshops
- Information from farming websites and YouTube channels

See

- Different soil conditions across farming lands
 - Changing weather and rainfall patterns
 - Farms with varying crop productivity
 - Increasing demand for modern farming techniques
 - Digital technologies being adopted in agriculture
-

Say & Do

- Collects soil information before cultivation
 - Consults agricultural experts when selecting crops
 - Searches online for crop recommendations
 - Compares different crop options
 - Uses digital platforms to improve farming decisions
-

Pain

- Difficulty selecting the most suitable crop
 - Limited understanding of soil nutrient analysis
 - Lack of accurate decision-support tools
 - Dependence on traditional farming knowledge
 - Risk of reduced crop productivity due to poor crop selection
 - Uncertainty caused by changing environmental conditions
-

Gain

- Accurate crop recommendations
- Better utilization of soil resources
- Improved agricultural productivity
- Increased farming profitability
- Data-driven farming decisions
- Sustainable agricultural practices
- Easy access to crop suitability analysis
