Demonstration of Proposed Features

This document presents the functional features proposed during the planning phase of the **Smart Agricultural Production** project and records their implementation status. The implemented features were demonstrated successfully through the web application and validated during functional testing. The project achieved its primary objective of providing an intelligent crop recommendation system using Machine Learning.

Proposed Features

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Home Page	Displays project information and navigation to the crop recommendation system.	Implemented	Yes	Successfully demonstrated.
2	Crop Recommendation Form	Accepts soil nutrient and environmental parameters from the user.	Implemented	Yes	User inputs validated successfully.
3	Input Validation	Verifies that all required values are entered before prediction.	Implemented	Yes	Prevents invalid input.
4	Machine Learning Prediction	Processes user inputs using the trained ML model to predict the suitable crop.	Implemented	Yes	Prediction generated successfully.

5	Prediction Result Display	Displays the recommended crop based on the prediction result.	Implemented	Yes	Output shown correctly.
6	Responsive Web Interface	Provides a simple and user-friendly interface for easy interaction.	Implemented	Yes	Successfully tested on desktop browser.

Feature Implementation Summary

Metric	Value
Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
